BY DON DAVIES
ILLUSTRATION BY KATERINA DAVIES
I am sitting in front of the fire doing research for an upcoming ocean passage. I like to study the passages of others. What routes did they take? Which months? Did they make good choices and, more important, did their planning result in a good passage? I am lost in this book . . . fascinated. I have made this passage several times, but the account I am reading bears little resemblance to what I remember. Yet it is our very own log of Entr’acte from 2005, our passage from Gibraltar to the Azores. It is our boat, our book, our writing, but these words seem to have been written by someone else. Seemingly innocuous entries trigger the memory. The blanks fill in and the past comes alive as the scenes become once again familiar. I look up to the bookshelf and smile. Entr’acte’s log, which began on her launch date April 1, 1980, and has continued uninterrupted to the present day, now fills 37 beautifully bound volumes.

At first glance, these books seem to be a useless compilation by someone with an obsessive/compulsive disorder, or perhaps simply the affection of a romantic. We were in our mid-20s when we began the Log of Entr’acte and we joked that these journals would be fun to read by the fire when we “got old.” Well, we’re approaching 70 now and we, along with Entr’acte, are still under way. I pause to think about logs. What are they really? What treasures do they hold? What should a log contain? Are they really necessary?

**Modest beginnings**
The log from our first 18-foot catboat, Drummer Buoy, was a simple all-in-one book, each page an identical form with columns for every

Thirty-something years of cruising fills a yard or so of bookshelf in Ed and Ellen’s pied-a-terre in Arizona, at top. Entr’acte’s ship’s log is a simple 10½ x 8, hard-bound, lined office journal. Ed and Ellen buy several at a time to ensure uniformity and make certain they do not run short. Their inside pages, at right, are filled with details of every day that passed on board.
conceivable phase of boat operation, maintenance, and navigation. Just fill in the blanks as you sail on. Included in this book was a guest log, basic piloting instructions, a Beaufort Scale to judge the wind, barometer instructions for predicting weather, and hurricane survival...advice, presumably, for when we failed to predict the weather properly. Our entries, when we made them, were simple and to the point but lacking in narrative. But Drummer Buoy was a very simple boat and our cruising in her was simple.

Thanks to Drummer Buoy, and inspired by the writings of Lin and Larry Pardey, the cruising bug bit hard. We built Entr'acte in our backyard, quit our jobs and, with very little money, set out to see the world in complete charge of our boat and our destiny.

A Nor'Sea 27, Entr'acte may have been a more sophisticated boat, and our goals were certainly more ambitious, but we still did not take log-keeping seriously.

I select volume one and open to 10 August 1981, departure day when we set out from Haverstraw, New York, to see the world: 0700 — “Left right on time!”

We have laughed a lot about that entry over the years. Just what were we on time for and why was it so important to leave “on time?”

One week and a hundred miles east on Long Island Sound, we made our next entry. In our defense, we were excited, completely exhausted from our preparations, and very familiar with Long Island Sound. Still, in retrospect, the lack of log-keeping was irresponsible.

Our first serious offshore passage from Block Island to Chesapeake Bay was chastening. Being a bit cavalier with our navigational entries, we mistook a lighted drilling ship for the New York City skyline and wasted hours in frustration and confusion. These were the salad days before GPS and all navigation was a combination of coastal piloting and celestial navigation using the sun, moon, stars, and planets. We learned in dramatic fashion the absolute necessity of maintaining a good, written DR (dead reckoning).

As we traveled farther, we met the serious cruisers, those “long-timers” with tens of thousands of miles under their keels. We were “the kids” who clearly needed some help and we absorbed all the advice that was offered. Foremost of their suggestions was the obligation to “keep a proper log.”

Inspecting the logs of these pros was impressive, not only for their regularity but for the detail. Hal Roth’s entries were those of a military vessel and the rest of the book a veritable time capsule.

Inspecting the logs of these pros was impressive, not only for their regularity but for the detail. Hal Roth’s entries were those of a military vessel and the rest of the book a veritable time capsule.

I select volume three and begin a delightful walk through Entr’acte’s history and our life with her. I open to a random page.
Seamanship skills | The ship’s log

and am reminded what it was like to cruise on a shoestring: a “night on the town” in Spain when we split one beer and one tapa (60 cents) between us. We stretched it out for three hours before drinking up and going home. The entry also mentioned how happy we were. In another volume, we are suddenly in Tonga playing with The Hausia Brothers Band before the King of Tonga. I move to another that details a particularly vile night beating up the coast of Panama and still another that, in one short paragraph, has captured the absolute wonder of our first celestial island landfall: “Perhaps this was not wasted energy after all!”

As we sailed on, we gradually matured into responsible sailors and our log evolved as well. It bears little resemblance to that all-in-one book from Drummer Buoy.

Logs for everything

Entr’acte’s log now comprises three separate books. The primary volume is the actual ship’s log. The second book is a dedicated engine log. The third is a maintenance log. At first, all of the information was in one book, but it proved far too difficult to find critical information when we needed it. Two years into our voyage, we met with a container ship officer and discovered the benefits of separate, dedicated logs. Now, finding critical information is a snap.

Without fail, we make a log entry every single day that we are on board. Each entry represents a day in the life of Entr’acte. The morning entry begins with a weather synopsis, harbor conditions, and overnight events. The next entry usually outlines the plan for the day on board or ashore. The evening entry is made just before bedtime and summarizes the day on board as well as significant activities ashore such as social events, concerts, and sightseeing. If an official comes on board, we always request that he sign the log noting the date and time. This book also serves as our journal to record thoughts and impressions on where we are, how we got there, what we did that day, and locals we met and their contact information.

The summary written at the end of every passage is extremely useful, even years later, for planning future passages.
Several pages are reserved at the back of the book for “significant postings.” These could be theater tickets, bus or train schedules, program cover pages, restaurant receipts, menus, marina bills, and almost anything worthy of future reference, memories, or proof of payment.

Passage entries
When under way, our navigation entries are regular and complete. For weather, we list barometer reading, sky, cloud cover, wind direction and speed, and sea state and direction. Navigation information includes position, destination, true course, speed, distance to next waypoint and distance to destination, sail combination, rpm if under power, hours accumulated while under power, estimated fuel consumption, and estimated hours of fuel remaining.

We keep proper watches and make log entries during the watch. These entries begin with our current position at the start of the watch and include true course, course to steer, barometer reading, weather, wind strength and direction, sea state and direction, and taffrail log reading. Headsail changes and reefing changes are also noted, as are sightings of ships, whales, or anything else of interest.

Our DR is constantly maintained, updated, and plotted on a paper chart. Every significant course change is logged and plotted along with the time of change. Despite the use of GPS, experience has taught us that electronics fail suddenly and without warning at very inopportune times, so it is vital to have written down the compass course you are trying to steer. We note changes in wind speed and direction as well as sea state and direction. If we take in or shake out a reef, we note it in the log along with the time.

At the conclusion of each watch, the watchkeeper writes a summary of the watch along with specific instructions for the new watch, such as cautions pertaining to events past and instructions for resolving present events like ships on the horizon or impending landfall. Verbal instructions are not remembered well by the new watch coming out of a sound sleep; written instructions are best.

Once the anchor is down and secure, we note the exact position along with bottom conditions and a brief description of the effectiveness of the anchorage in case we choose to visit it again someday.

At the conclusion of each passage we write a passage summary. What went well? What went wrong? Did our tactics work? What percentage of time did the wind blow from each direction and what point(s) of sail were we on? What percentage of the time was under power? How much fuel was used? How much remains? Which sail combinations did we use and which were most/least effective? What would we do differently? Anything of significance is noted while it is still fresh in our minds.

With the above data, we can reconstruct the entire passage, either while under way or years later. These pages have proven extremely valuable in planning future passages.
Nostalgia aside, there are other less obvious uses for a log.

**Research**
Perhaps you wish to repeat a passage or return to a harbor you visited some years ago.

Before departing for Europe in 2003, we read our log from the 1983 passage, which helped us correct our past blunders and have a much better trip. We knew exactly where we were going and who we wanted to see when we arrived. Where was the Bermuda Customs office? It is in many ways like having our own personal cruising guide.

Memory is inaccurate. Promises made at sea are soon forgotten in harbor. Many times we spoke of a passage where “nothing happened,” yet after reading the log of that passage we were surprised to find that it was not quite as uneventful as we remembered it.

**Buying or selling a boat**
When buying or selling a boat, a set of detailed logs will invariably be an asset. I would want to inspect the logs of previous owners, especially the maintenance logs. Here you will discover how and where the boat was used and how she handled and performed under various conditions. Detailed accounts of her passages show how the vessel was sailed and treated. By reading the comments in the log you gain important insight into the actual performance characteristics of a vessel. Were her miles easy or hard? The maintenance logs speak for themselves. No log, no proof, and possibly no maintenance.

**Legal**
The ship’s log provides legal documentation of events. A U.S. Customs officer tried to charge us import duty on a new engine that was installed in a foreign country. The burden of proof was on us and our engine log saved the day.

Fiji Customs actively prosecutes boats that anchor in Fijian waters before officially clearing into the country. The day we arrived, three boats were fined and our officer was out for blood. “Did you stop and anchor anywhere along the way before you arrived here?” I presented our logbook. He looked at it carefully, smiled, and said, “Thank you.”

A yacht collided with a tugboat and several people were killed. The port officials decided that our friends had caused this collision, but their detailed log proved that they were hundreds of miles away from that location at the time the incident occurred.

A yacht is allowed to stay in Europe duty-free for a maximum of 18 months. Sail over to Morocco and return to Europe and you get a new 18 months. Likewise, if the crew are in Spain for more than 183 days, they become liable for income tax. With Europe being by and large a free-travel zone, passport stamps into and out of each country have become a thing of the past, so your log might well be the only proof that you did not overstay your time. Passports and clearance papers are sometimes not enough. As one official cautioned us, “Sometimes you can never have enough proof.”

Will your log actually be believed? The more regular, consistent, detailed, and professional your entries, the more likely it is your log will be accepted.

Thanks to these records, we know exactly how much fuel we use at various rpm settings and conditions. We can accurately gauge our consumption throughout a passage, reducing the chance of running out of fuel before we arrive in port.

**Maintenance log**
This book is a simple tabbed journal. Each section is dedicated to various items on board: watermaker and survival watermaker, galley, rig, dinghy and outboard, sails, winches and deck gear, charts (which are on board and which are needed), computer, life raft, and ditch bag. The maintenance log holds a record of repairs due to breakdown and also documents dates of preventive maintenance.

An irreplaceable reference

The engine log’s inside cover is a trove of data . . .
rode? The list seems endless. With hundreds of things to maintain, how does one keep track? Time passes swiftly, and the timing of events and routines gradually blends together. Without a written record, these small but vital jobs can be neglected.

**Treasured memories**

Thanks to our logs, all of our adventures are documented. Now, as we approach the golden years and can manage a little time to sit by the fire, we read the stories to each other. We are reminded of the wind in the sails, the landfalls, and the excitement of arriving in a new port and meeting locals who became dear, lifelong friends. These volumes are real books, not a virtual computer or tablet file. We tried to keep an electronic log, but as we made the same entries, they seemed to disappear. No, we prefer books we can see, touch, feel, and smell... complete with the occasional old saltwater stains. Or might they possibly be tears? Our logs remind us of what cruising should be. Each page is a day in the life of Entr’acte.

If you maintain a log for your good old boat, it will be a treasure.

**Ed Zacko** is a Good Old Boat contributing editor. He and Ellen met while playing in the orchestra of a Broadway musical. They built their Nor’Sea 27, Entr’acte, from a bare hull and since 1980 have made four transatlantic and one transpacific crossing. Entr’acte is now based in Seville, Spain, where Ellen and Ed are happily sailing in and around the Mediterranean and playing in the jazz clubs of Spain, France, and Morocco. When not on board Entr’acte, they heave-to in Phoenix, Arizona, where they maintain a busy concert schedule throughout the Southwest U.S. Follow them on www.enezacko.com.
